PROFESSIONAL SUMMARY

Data Analyst and BI Analyst with 4+ years of experience delivering data analysis, business intelligence, reporting, automation, and data solutions for commercial, finance, operations, logistics, FMCG, professional services, and research clients. Experienced across the full analytics lifecycle, from understanding business requirements and extracting and transforming data to building analytical models, dashboards, automated reporting pipelines, and data validation processes. Currently completing an MSc in Data Science, with applied machine learning projects in classification, regression, natural language processing, and streaming data pipelines.

TECHNICAL SKILLS

Power BI, DAX, Power Query, DirectQuery, Looker Studio, SSRS, SQL, MySQL, T-SQL, Oracle, BigQuery, SQL Server, Python, Pandas, NumPy, scikit-learn, Machine Learning, Classification, Regression, NLP, Statistics, PySpark, Spark MLlib, ETL, Data Modelling, Star Schema, Data Pipelines, Kafka, Spark Structured Streaming, Streamlit, Excel, Power Pivot, Excel VBA, Google Apps Script, Power Automate, Git, GitHub

PROFESSIONAL EXPERIENCE

Business Intelligence Developer | **DaTarique Limited** | Sep 2025 – Present

- Built a near real-time operational KPI reporting solution in Looker Studio using a self-refreshing data pipeline from live APIs into Google Sheets, with batched, resumable Google Apps Script processing and lock-based concurrency control, replacing a manual extraction process.
- Rebuilt a slow Power BI timesheet report running on tens of millions of rows, replacing a single SQL Server view with a star schema and cutting its scheduled refresh, which runs eight times a day, from over 20 minutes to under 9. Also reworked complex DAX cost calculations on an Oracle DirectQuery source that were hitting timeout and row limits.
- Built a self-service Power BI project analytics page using field parameters, a disconnected selection table, and bookmarks, letting users choose their own measures and breakdowns and toggle between pivot and table views from one page.
- Delivered a programme management report, providing leadership with a consolidated view of financial performance, publication output, and proposal pipeline for monthly leadership reviews and funding decisions.
- Built a live shipment tracking report for a Bahrain procurement client that identified at-risk shipments early, enabling the team to re-plan warehouse intake and brief stakeholders before disruptions occurred.
- Built and maintained a governed Power BI semantic model as a reusable analytical layer for non-technical users, centralising business logic instead of recreating calculations across individual reports.
- Built month-end validation reports covering ITD spend and FTE data to compare data hub computations against source data and identify logic errors before figures were released to stakeholders.

Data Analyst | **Freelance** | Jan 2025 – Aug 2025

- Engineered an automated daily sales reporting pipeline from SQL Server into Power BI, replacing manual extracts with a self-refreshing report for monitoring revenue, channel performance, and same-day anomalies.
- Reduced manual reporting effort by roughly 50% by re-engineering data extraction using SQL stored procedures and Excel VBA automation across reporting and HR workflows.
- Deployed parameterised SSRS reports for operational and financial stakeholders, standardising reporting formats and reducing reliance on ad-hoc analyst requests.

Data & BI Analyst | **UrBizEdge Limited** | Sep 2023 – Dec 2024

- Built a marketing cost-tracking report that identified inefficient and underperforming channels, contributing to a 25% reduction in unnecessary expenses and informing channel-level budget allocation.
- Automated HR and approval workflows using Power Automate, reducing end-to-end processing time by over 50% and removing manual handover delays between requesters, approvers, and HR.
- Designed a workforce management report covering employee utilisation, PTO patterns, and productivity, supporting leadership decisions around hiring, capacity planning, and team performance.

- Led data validation and reconciliation of revenue and financial metrics across reports, ensuring consistency between source systems and stakeholder-facing dashboards.
- Analysed FMCG survey data to identify consumer insights used directly in product launch decisions.

Project Analyst | **Deerfield Integrated Services Limited** | Jan 2022 – Sep 2023

- Defined metric frameworks and data requirements that supported downstream project decisions and process refinements.
- Built interactive Excel dashboards covering project costs, revenue streams, and margin performance for project leadership.
- Managed project finances and workflow planning to support delivery within schedule and financial oversight requirements.

SELECTED PROJECTS

Grid Stability Prediction: Built a machine learning classification solution for electrical grid stability using simulated network data. Compared scikit-learn classifiers using standard cross-validation and model evaluation frameworks.

Building Energy Consumption Prediction: Developed regression models for building energy consumption data and compared feature engineering approaches and model families using scikit-learn.

Tweet Sentiment Analysis: Built a four-class sentiment classifier on 871K English tweets using Spark NLP, TF-IDF and Logistic Regression in Spark MLlib, reaching 95.7% accuracy on 173K held-out tweets. Designed the scoring stage as a streaming pipeline for Kafka and Spark Structured Streaming.

AskTheLedger, Voice-to-SQL System: Built a voice-to-SQL system that converts spoken questions into safe, read-only SQL queries and returns interactive charts. Used Whisper for transcription, Gemini for query generation, and Streamlit for the user interface.

TEACHING AND WRITING

SQL for Data Analysis (online course, UrBizEdge): Instructor of an online SQL course covering relational database design, querying, joins, subqueries, CTEs, and stored procedures, with hands-on exercises.

Data Analytics Tutor, Preply (part-time, Mar 2025 – Present): One-to-one teaching in SQL, Python, Excel, and Power BI for beginners, career changers, and working analysts.

Technical articles and webinars: Published SQL tutorials on the UrBizEdge and MHS Analytics blogs covering window functions, joins, stored procedures, and database setup, and hosted recorded webinars on YouTube.

EDUCATION

MSc, Data Science (in-view) | Università degli Studi di Napoli Federico II | 2025 – 2027

Relevant modules: Data Mining and Machine Learning, Statistics, Big Data, AI Systems Engineering, Methods for AI and Algorithm Design, Information Systems and BI, Data Security

CERTIFICATIONS

- Microsoft Certified: Power BI Data Analyst Associate
